BU018 Crystal Bulle Battery Cap

The type of Bulle clock with a Crystal dome is normally found on an oval ebonised wood base although there are some with gold leaf bases. The taller movements are mainly found with a battery tube that is embedded in the wooden base. For some reason the top cap made of brass is sometimes missing which leaves a gaping hole with the battery on full view. I can now supply these to fit the normal 53.00mm tubes. Before ordering please make sure you have measured the tube diameter. These are caps are made of 0.5mm soft brass which is spun to shape and size on the lathe.
