

EU008 Eureka Hardened Bearing Glass

These superb hardened glass discs for the Eureka clock are 2.5mm thick and 22.0mm diameter. Many Eureka clocks are found with broken and smashed bearing glass which impairs both function and aesthetics. These smooth machined edge disc are much harder than the ground edge EU001 which they replace.

Priced per pair, but also available individually at £10 per glass.

Price includes recorded delivery within mainland UK.
