

EU013 Eureka Tall Round Dome

These domes have been specially manufactured to fit the Eureka round pressed brass base. They are of excellent quality and have been hand blown . They therefore have no seams or ridges but the glass may vary in thickness. Because they are hand blown they are quite a bit heavier than mass produced domes.

Height: 250mm

The inside diameter is approx 162mm which is perfect for the brass base which should be 160mm minimum diameter.

Before placing an order please check the inside diameter of the platform where your dome sits.

Price includes recorded delivery within mainland UK.
